About Us

With a sole objective to serve the customers to build most modern, energy efficient, cost effective starch, bio-ethanol, distillery & Micro Brewery projects a team of self-motivated experienced engineering professionals started **Mega Engineering** in Pune, India. With core experience in technology development, process design, project management, commissioning, plant operation and every minor aspect of the Biofuel, Distillery, Micro Brewery projects. **MEGA** gained high confidence of its clients in a short span of time. With this high confidence expressed on the technical ability of our team. Our clients motivated us by awarding contracts to supply the complete plants. Inspired by the excellent results of our technology at various projects. Mega Engineering is now continuously striving for the excellence in all its endeavors by providing cutting edge technology, most technically accurate engineering solutions and most efficient project management services, to produce international quality of product. Energy efficient distillation and dehydration plants in terms low steam and minimum electricity to produce international standard biofuels and neutral spirit products, high conversion efficiency of fermentation systems and zero liquid discharge plants are the hallmark of the new designs developed by us, which always results into extra profits to our customers consistently. Customer satisfaction is our aim and we are continuously motivating our technologists, design...
